

With its original "User Cabs," Fractal Audio Systems pioneered the use of installable Impulse Responses (IRs) for speaker cabinet emulation in a hardware processor.

In 2014, UltraRes™ technology increased the accuracy of our speaker cabinet emulation to levels previously unattainable without massive CPU requirements or intolerable latency. UltraRes™ achieves the resolution of long IRs (up to 170ms) without added CPU burden or storage requirements.

This firmware includes 10 FREE samples from **"The Cab Legends" by TheAmpFactory** --- a collection of over 700 UltraRes IRs for the Axe-Fx II (Mark II or XL).

TheAmpFactory believes that superior results requires both knowledge and creativity. "There are no rules. We make sure things sound the best they can, which sometimes means strange techniques and options. Other times it is as simple as things can get. Thank you, and please enjoy!"

Visit theampfactory.com/ultrares-irs to purchase the entire "Cab Legends" collection, and watch TheAmpFactory for more UltraRes™ releases!

Visit shop.fractalaudio.com for additional IR "Cab Packs."
