

Factory Presets v 27.00, Fremen Edition - Axe-Fx III

Many Axe-Fx III users wanted updated Factory Presets for the latest firmware (currently 27.00, still in beta), as the last official factory presets were released with firmware 19.00. So, I decided to update at least the first 100+ presets, and more specifically, those focusing on an amp model.

What's in there :

Presets 1-106 are factory presets in which I mostly fixed the levels. I also resetted some amps, where needed. Some presets needed a releveling, like the one (Petrucci Rig or the MK IV one, I'm not sure) where the clean USA scene could damage your speakers, as it is insanely loud ! I didn't want to touch anything else, as these are not my presets, but there's some occasional small tweaks, like lowering the gain in the Bogner Uber preset.

Presets 107-119 are my take on some of those factory presets. This time, my tweaks are more significant – for example, I changed the cabs (using **Dyna-Cabs** most of the time), tweaked the amp tonestacks, reverb and delay settings, added compression in some clean scenes etc. They're still not “my” presets, but much closer to what I would use, without changing everything.

Presets 120-128 are bonuses : this time, they're 100% from me, but using factory cabs instead of my own custom made IRs (*I still prefer my own IRs, of course*) :

“Fremen Amp Pack 5153” is one of my “Amp Packs” presets ;

“Fremen 8 shades of Fried BE” is from my “Rock & Metal vol. 1” pack ;

“Fremen Super Verb clean” is from my “Cleans, Ambient & SFX” pack ;

“Fremen Refrigerator” is also from my “Cleans, Ambient & SFX” pack (inspiration : Michael Landau) ;

“Fremen Fryette Deliverance 1” is from my “Rock & Metal vol. 2” pack ;

“Fremen Revv Gen Purple 3” is from my “Rock & Metal vol. 3” pack ;

“Fremen Dumble and Dumbler GoT” is a preset I shared for the Game Of Tones series ;

“Fremen Silly autotune” is from my “Rock & Metal vol. 1” pack, used on my latest video displaying the pitch shift block of firmware 27 ;

“Fremen's Drones of Arrakis” is one of the Factory Presets I made, normally at the end of bank C, and updated to firmware 27.

The original versions of those presets, using my custom IRs, are available here :
